

Rack Mount Guide

Installing the Rack Mount:

Determine the location on the rack that the taps are to be installed. Line up the mounting holes on each side of the rack mount with the holes on the rack.

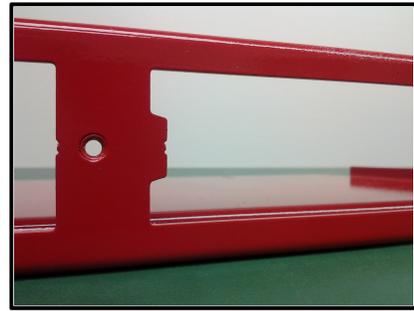

Once the holes on the rack mount and the rack are lined up, use four screws to secure it to the rack.

Installing the Datacom Systems device into the rack mount:

Notice that the Datacom Systems device has a notch on the left side. This notch is used to hold the device until it is screwed in.

Slide the tab on the rackmount into the notch of the Datacom device. This will secure the tap into the rackmount.

Use the thumbscrew on the other end of the Datacom device to screw it into the rack mount.

The device is now securely in place within the rack mount. Repeat for each additional Datacom device installed.
